

North Fork Deer Creek THP

Stand Inventory Map

Section 31, T17N R10E MDB&M - Nevada County, California
BAF 20 cruise on a 400 ft grid, 142 plots, 534 ac in 7 units

Scale 1:12,000 (1 in = 1,000 ft)

LEGEND

- Relative density (% of max SDI)
- < 35 %
 - 35-50 %
 - 50-65 %
 - 65-80 %
 - > 80 %
- Cruise plot, basal area (sq ft/ac)
- < 150
 - 150-250
 - 250-350
 - > 350
- THP plan area
- Watercourse (Class I / II)
- Reservoir
- Roads
- County road
 - Local road
 - Logging / seasonal road
 - Contours (100 ft)

STAND TABLE (live trees >= 5 in DBH; per-acre plot means; ME = 95 % margin of error on basal area)

Unit	Rx	Ac	Plots	TPA	BA	QMD	% SDI	MBF/ac	MBF	ME %
1	CT	175	41	315	242	11.9	72	27.9	4,867	11
2	CT	184	47	288	229	12.1	68	26.9	4,954	11
3	CT	29	6	258	247	13.2	68	30.0	859	47
4	CT	42	14	335	259	11.9	73	30.3	1,260	17
5	SEL	31	9	237	193	12.2	54	26.6	828	31
6	SEL	27	9	264	247	13.1	75	33.7	898	42
7	SEL	47	16	216	211	13.4	51	32.9	1,561	27
All		534	142	288	234	12.2	67	28.5	15,227	7

NOTES

Relative density = stand density index (summation form) as a percent of the basal-area-weighted FVS Western Sierra maximum SDI. Above ~55-60 % stands are in the zone of imminent competition mortality; the thinning units are marked to 40 %.

Standing net volume 15,227 MBF Scribner (28.5 MBF/ac); simulated marking removes 2,078 MBF net. Units 3, 5, 6, 7 fall short of the 20 % precision target with 6-16 plots each and would need additional plots before a sale.

DEMONSTRATION: the cruise data are simulated and the plan is illustrative. No trees were measured.
